

1 at 10.) In keeping with OEHHA's direction that there only need be "some description" of
 2 the products, OEHHA remarks that, "clearly, it would [also] be sufficient simply to say
 3 'aerosol spray paint', 'car wax' or 'paint thinner'." (Exh. 203, FSOR 22 CCR §12903 at
 4 10.) OEHHA identifies these product descriptions as sufficient to identify the category or
 5 type of product at issue and allow the public agency and noticed entities sufficient
 6 information to "investigate" the allegations. (Exh. 203, FSOR 22 CCR §12903 at 10.)

7 In specific response to a request for deletion of the language requiring description
 8 only of the product "type" sufficient to inform the recipient "of the nature" of the item at
 9 issue, OEHAA rejected the request and kept the language to "assure the regulation is not
 10 interpreted to require identification of the precise terms, e.g., the individual cans of paint."
 11 (Exh. 203, FSOR 22 CCR § 12903 at 13.) OEHHA balanced the broad remedial purpose
 12 of the statute with Defendants' pleas for greater specificity by encouraging descriptions
 13 like, "'aerosol spray paint', 'typewriter correction fluid' or 'paint stripper' without
 14 requiring an unnecessarily particular identification of the product." (Exh. 203, FSOR 22
 15 CCR § 12903 at 14.)

16 In the same context, OEHHA has been careful to also be equally clear with regard
 17 to what is *not* required for an adequate description of the violation. OEHHA clarified that
 18 a citizen enforcer need not utilize product identification numbers in describing the noticed
 19 products or even describe products such as offensive paints by their shade. (Exh. 203,
 20 FSOR 22 CCR § 12903 at 10.) OEHHA takes this position to avoid the potential that a
 21 requirement for "[i]dentification of specific codes and product numbers would simply
 22 increase the possibility that products that clearly fall within a description of the products
 23 in question would be excluded from the action." (Exh. 203, FSOR 22 CCR § 12903 at
 24 16.) In fact, OEHHA went to further lengths to unequivocally identify that other
 25 information such as "UPS number, SKU number, model or design number or stock
 26 number or more specific identification" of consumer product need not be in an adequate
 27 Notice. OEHHA rejected a specific request the inclusion of model numbers in a
 28 consumer product Notice because, though it "may be material in some cases", it would

1 risk the exclusion from the action of slightly different model numbers “due to a failure to
 2 reference them in the notice.” (Exh. 203, FSOR 22 CCR § 12903 at 17.) OEHHA
 3 excluded all of this information on their finding that it is not necessary to comply with the
 4 statute and because they anticipated that such clarification would eliminate disputes over
 5 the notice provisions. (Exh. 203, FSOR 22 CCR § 12903 at 16.) OEHHA summed up its
 6 position by declaring that the notice requirements are “not intended to require that highly
 7 technical information be provided, ... or to otherwise turn the notice requirement into a
 8 trap for the unwary.” (Exh. 203, FSOR 22 CCR § 12903 at 15.)

9 An illustration of the broad scope of a single “category of products” can be seen in
 10 the context of the identification of multiple violators in a single Notice. As OEHHA
 11 states, “a single notice may contain as many as 50 or 100 alleged violators. This format
 12 may be convenient when the different violators have committed *basically the same type*
 13 *of violation* which can be described in a single notice.” (Exh. 203, FSOR 22 CCR § 12903
 14 at 8, emphasis supplied.) OEHHA thus expressly recognizes that the scope of a single
 15 Notice, and thus a single “category of products” or “type of violation”, is understood to
 16 include many different specific products of the same “type” or “category”.

17 The multiple examples of adequate descriptions are contrasted with the example of
 18 the overbroad and unacceptable product type descriptions of ““various aerosol, paint,
 19 adhesive and/or automotive products, including but not limited to...’ or ‘various chemical
 20 products, sold in bulk or as finished products.’” (Exh. 203, FSOR 22 CCR § 12903 at 10.)
 21 The latter descriptions are only unacceptable because “they would appear to encompass
 22 virtually any product.”

23 C. Mr. DiPirro’s December 31, 2001 Notice of Defendant J.C. Penney in This
 24 Case Gave DiPirro Standing to Enforce All Proposition 65 Violations from
 25 Defendant’s Sales of the “Painted Glassware” Category or Type of
 26 Products.

27 In addition to Mr. DiPirro’s compliant Notices giving him standing as to the
 28 “painted glassware” category of products as a matter of law, J.C. Penney’s preexisting

1 familiarity with this product category also ensures that Plaintiff has standing as a matter of
 2 law. As J.C. Penney argues, a Notice must provide a Defendant with enough information
 3 to appreciate the nature of the product type and be able to bring itself into compliance.
 4 The evidence in this case demonstrates J.C. Penney not only knew exactly which of its
 5 painted glassware contained lead, but was already involved in its own program to test
 6 such products for compliance with *Federal* consumer protection standards *for lead*.

7 Mr. DiPirro's Notices to J.C. Penney, by J.C. Penney's own admissions, provided
 8 plenty of information to understand which products were at issue and which products
 9 were the subject of the litigation. Early in the litigation, at the March 13, 2003, deposition
 10 of Mr. Brinkman (Senior Buyer, J.C. Penney, Tabletops Division), Mr. Brinkman
 11 provided clear testimony that he knew the "painted glassware" category of products to
 12 include numerous products beyond just the Dansk products. In fact, "painted glassware"
 13 was product description terminology that Mr. Brinkman, himself, used long before
 14 Mr. DiPirro's 60-Day Notice of Violation. At his deposition, Mr. Brinkman understood
 15 painted glassware to include the Dansk *collection* Syratech goblets (not sold because of up
 16 to 58% lead in the paint), Home Essentials & Beyond *series* of assorted wine glasses
 17 (Floral Wine, Flamingo Wine, Fruit and Vintage Wine), two Block China Holiday
 18 glassware patterns (Festive Ribbon and Splendor series), and the Certified International
 19 Flora, Sunrise and Midnight Christmas glasses. (Exh. 26, Brinkman Depo., 104:6-22). At
 20 trial, Mr. Brinkman expanded his testimony regarding what J.C. Penney products
 21 qualified as "painted glassware", adding Gibson Overseas Crazy Daisies and Tropical
 22 Delight, Libbey Orchard Fruit, J.C. Penney's own Stripes collection, Block/Salton's Jonal
 23 Hudson Valley, Lennox Butterfly Meadows, as well as J.C. Penney's directly imported
 24 glass ice tea and spheres collection of glasses.

25 The list of "painted glassware" products was not difficult to procure from J.C.
 26 Penney as Defendant already had in place a testing program to ensure that products of this
 27 type – painted glassware with lead – complied with Federal consumer protection
 28 requirements. J.C. Penney either tested the products themselves or required confirmation

1 from the vendor that the product met the Federal lead and paint requirements, *e.g.* Lennox
 2 Butterfly Meadow. Moreover, according to J.C. Penney, Defendant even knew that most
 3 of these products required Proposition 65 warnings from the time J.C. Penney first carried
 4 them and, in some cases, well before Mr. DiPirro's Notice was received. In fact,
 5 Mr. Brinkman testified that each of Home Essentials models of painted glassware and the
 6 Holiday patterns of the Block/Salton painted glass were supposed to have Proposition 65
 7 warnings from the time they were first sold by J.C. Penney. (Exh. 26 at 105-106).
 8 Further, J.C. Penney documents from representatives of their RTL testing facility
 9 repeatedly commented that all glasses of this type (*i.e.*, externally decorated with paint)
 10 must be tested for lead leach.

11 Even J.C. Penney's internal documents confirm that Defendant understood all of
 12 the identified "painted glassware" products to be part of Mr. DiPirro's Notice. In
 13 communications discussing the Federal testing program for the painted glassware with
 14 lead paint, J.C. Penney, itself, acknowledges that all different brands, in addition to
 15 Dansk, are all the same *type* of product. (Exh. 100-1238, "any and all *type* of these
 16 glasses".)

17 D. Mr. DiPirro's Notice to J.C. Penney of "Cosmetic Kits" as the *Type* or
 18 *Category* of Products at Issue Provided Sufficient Information to Allow
 19 Defendants to Understand which Products Were the Subject of the Lawsuit
 20 and Accordingly the Notices Confers Standing but not Knowledge.

21 J.C. Penney's buyers admitted they understood the significance of "cosmetic kits"
 22 sufficiently to distinguish them from any other product sold by J.C. Penney. On two
 23 separate days of her trial testimony, October 20 and 22, 2003, Christine Parker admitted
 24 she understood the term cosmetic kit to include any collection of cosmetic color
 25 components in a reusable case, similar to the Markwins' Wings of Beauty. (Parker Test.
 26 10/20). In fact, Ms. Parker explained that the "cosmetic kits" unlike the individually sold
 27 cosmetic color components, were all manufactured in China and supplied in limited runs
 28 or orders. (Parker Test. 10/20). This was very different from the domestically

1 manufactured individual cosmetics both in terms of price and the immediate availability
 2 of the domestic separate components. (Parker Test. 10/20).

3 Moreover, despite the Notice identifying only a limited example of the Markwins
 4 kits, Ms. Parker admitted being aware of other Markwins “cosmetic kits” also sold by J.C.
 5 Penney – including the Color Reflections and Color Blockbuster kit. (Parker Test. 10/20).
 6 Ms. Parker also readily admitted familiarity with two Riviera Professional “cosmetic kits”
 7 from two different Holiday Seasons. (Exhs. 7D and 7E, Parker Test. 10/20). Ms. Parker
 8 also testified as to her understanding that the Luxurious Traincase, IMS Coolbag and Liz
 9 Taylor Holiday Blockbuster were also all “cosmetic kits” designed and marketed as such
 10 for special seasonal promotions. (Parker Test. 10/20).

11 Another J.C. Penney buyer, Christine Bokar, also acknowledged her familiarity
 12 with the term “cosmetic kits” and that she believed the term encompassed the Riviera
 13 Private Portfolio series of holiday kits. (Exh. 27 (Bokar Depo.) at 25:8-18). Riviera
 14 offered holiday kits for both Christmas and Mother’s Day. (Exh. 27 (Bokar Depo.) at
 15 25:19-27:13).

16 Having an understanding of the significance of “cosmetic kits”, Mr. DiPirro’s
 17 Notice gives standing for Plaintiff but does not impart knowledge for the reasons set forth
 18 at pages 95 – 100 of this tentative decision.

19 E. Mr. DiPirro’s Notice to Macy’s West of “Cosmetic Kits” as the *Type* or
 20 *Category* of Products at Issue Provided Sufficient Information to Allow
 21 Defendants to Understand Which Products Were the Subject of the Lawsuit
 22 and Accordingly Confers Standing but not Knowledge.

23 Ms. Morello testified as the senior-most buyer of Macy’s West’s cosmetic
 24 products. Though she professed to be ignorant of the meaning of “cosmetic kits”, she
 25 pointedly acknowledged (in response to questions by the Court) her specific familiarity
 26 with the “kit” terminology as being a collection of products packaged together for sale,
 27 such as a “shaving kit”. (Morello Test., 9/8/03). Though Ms. Morello and Ms. Barr each
 28 claimed to reference the products at issue as “blockbusters” or “Purchases/Gifts with

1 Purchase", they also both acknowledged an understanding that, for color products, the
 2 products identified by Plaintiff qualified as cosmetic kits.

3 Ms. Brandt sent tender letters to all of her cosmetic vendors, further supporting her
 4 understanding that the notice involved cosmetic kits in addition to the Markwins kit.

5 Ms. Brandt also testified to contacting Plaintiff's counsel with regard to the Notice. It is
 6 significant that her inquiry of Plaintiff's counsel was not *whether* there were other
 7 cosmetic kits, besides Markwins, at issue, but simply a further identification of which
 8 specific other products were also at issue.

9 Under the totality of this evidence, Macy's West could distinguish the cosmetic
 10 kits from the other cosmetic color products that were not sold in "kit" form. Accordingly
 11 Mr. DiPirro's Notice creates standing for him to sue for enforcement of all "cosmetic kits"
 12 sold by Macy's West.

13 IV. PLAINTIFF IS NOT ESTOPPED FROM SEEKING RELIEF IN THIS ACTION

14 Defendant's assertions that estoppel (whether equitable or judicial) must foreclose
 15 Plaintiff's claims are without any foundation in fact that Plaintiff was aware of sufficient
 16 information to disclose specific products models or numbers to Defendant and that
 17 Defendant was ignorant of that same information. For purposes of equitable estoppel,
 18 four elements must be present and it is Defendant's burden to prove each of them:

19 (1) the party to be estopped (DiPirro) must be apprised of the
 20 facts; (2) he must intend that his conduct shall be acted upon,
 21 or must so act that the party asserting the estoppel had a right
 22 to believe it was so intended; (3) the other party (Macy's and
 23 JC Penney) must be ignorant of the true state of facts; and
 24 (4) JCP and Macy's must rely upon the conduct to their injury.

25 *Driscoll v. City of Los Angeles* (1967) 67 Cal.2d 297 at 305.

26 None of these factors have been proven by Defendants. Defendants have never
 27 shown that Plaintiff had completed the purchase, investigation, testing and expert analysis
 28 of each of the *model* or *stock* numbers of the relevant *product type* sufficient to apprise
 Plaintiff of the facts that Defendants claim were withheld.

1 Moreover, the doctrine of equitable estoppel is not appropriate when estoppel
2 would “nullify a strong rule of policy, adopted for the benefit of the public”. *In re*
3 *Marriage of Comer* (1996) 14 Cal.4th 504. Here, there is a very strong rule of policy in
4 broadly interpreting Proposition 65 in light of its stated goal of protecting consumers from
5 harmful exposures to toxic chemicals. There is a stated policy of only requiring the
6 identification and disclosure of product types or categories so that other versions of the
7 same type of product are not improperly excluded. Therefore, the doctrine of estoppel
8 does not apply.

9 V. DEFENDANTS' PROOF OF PROPOSITION 65 WARNING EXEMPTION

10 A. Defendants Have Established that Their Sale of Cosmetics is Exempt from
11 Proposition 65's Warning Requirement

12 Defendants have demonstrated that the exposure to lead from cosmetic products do
13 not require a warning under Proposition 65. Health & Safety Code § 25249.10 provides
14 that: “Section 25249.6 shall not apply to any of the following: ... (c) An exposure for
15 which the person responsible can show ... that the exposure will have no observable effect
16 assuming exposure at one thousand (1000) times the level in question for substances
17 known to the state to cause reproductive toxicity In any action brought to enforce
18 Section 25249.6, burden of showing that an exposure meets the criteria of this subdivision
19 shall be on the Defendant.” The exemption test is based upon the Plaintiff’s showing that
20 an “exposure” has occurred, so the nature of the Defendant’s showing is in response to the
21 exposure identified by Plaintiff. *See, e.g.,* Regs. § 12821(a) (“For purposes of the Act,
22 ‘level in question’ means the chemical concentration of a listed chemical *for the exposure*
23 *in question*”) (emphasis added).

24 The Proposition 65 implementing regulations, specifically Title 22 of the
25 California Code of Regulations, Chapter 3, Article 8, provide guidance on how the no
26 observable effect defense may be scientifically established. 22 Cal. Code Regs.
27 § 12801(a) provides the basic framework of analysis: “The determination of whether a
28 level of exposure to a chemical known to the state to cause reproductive toxicity has no

1 observable effect for purposes of Health and Safety Code Section 25249.10(c) shall be
 2 based on evidence and standards of comparable scientific validity to the evidence and
 3 standards which form the scientific basis for the listing of a chemical as known to the state
 4 to cause reproductive toxicity.”

5 Article 8 sets forth both general principles and a “safe harbor” approach, described
 6 in further detail in §§ 12801-21, under which compliance is guaranteed. The regulation
 7 sets forth a “safe harbor” of methods by which an exposure “shall be deemed to have no
 8 observable effect” (§ 12801(b)), but states that “Nothing in this article shall preclude a
 9 person from using evidence, standards, assessment methodologies, principles,
 10 assumptions or levels not described in this article to establish that a level of exposure has
 11 no observable effect at one thousand (1,000) times the level in question.” § 12801(a); see
 12 also Final Statement of Reasons for Article 8, at 67.¹⁷

13 Under the safe harbor of § 12821(b), the question whether the level of exposure
 14 creates no observable effect involves a determination of “the level in question (stated in
 15 terms of a concentration of a chemical in a given medium) times the reasonably
 16 anticipated rate of exposure for an individual to a given medium.” “The reasonably
 17 anticipated rate of exposure shall be based on the pattern and duration of exposure that is
 18 relevant to the reproductive effect which provided the basis for the determination that a
 19 chemical is known to the state to cause reproductive toxicity. (For example, an exposure
 20 of short duration is appropriate for a teratogenic chemical, whereas a chronic or protracted
 21 exposure is appropriate for one that retards fetal growth)” § 12821(b).

22 Dr. Lakin’s TUBE analysis assessed the potential magnitude of alleged exposure
 23 met the safe harbor approach of § 12821, by comparing the reasonably anticipated rate of
 24

25 ¹⁷ “[T]he methodologies, data, principles, assumptions and levels described in the sections following section 12801
 26 are not exclusive and do not prevent a plaintiff or defendant in an enforcement action from establishing ‘no
 27 observable effect’ by other means. However, such a showing must be based upon data, standards, methodologies,
 28 principles and assumptions which are scientifically valid” “A person is permitted to use any data, standards or
 methodology, or apply any assumptions or principles desired to show that an exposure would produce no
 observable effect assuming exposure at one thousand times the level in question. Where a ‘safe harbor’ level or
 methodology is not used, it remains a question of fact in any enforcement action whether the exposure poses [sic]
 would produce no observable effect within the meaning of the Act.” *Id.*

1 intake or exposure to the MADL of 0.5 µg/day. Dr. Lakin properly applied toxicological
 2 exposure assessment principles and relied upon appropriate usage data from CTFA, the
 3 EU, and the EPA Exposure Factors Handbook to conclude that the amount of lead placed
 4 on the skin of the user for any individual product within a cosmetic kit, and for a worst-
 5 case use of all tested products in any cosmetic kit,¹⁸ did not exceed 0.5 µg/day, whether
 6 the user was an average user, or in the upper 90th percentile of all users.

7 Moreover, Dr. Lakin appropriately assessed the absorption of lead through the skin
 8 and stomach, consistent with standard toxicological exposure assessment principles, as
 9 well as Proposition 65's implementing regulations as described in the "pattern and
 10 duration of exposure" in § 12821 and with guidance in the Final Statement of Reasons
 11 that indicated it was appropriate for absorption to be considered in determining whether
 12 an exposure posed no observable effect within the meaning of Proposition 65. The court
 13 rejects as unscientific and contrary to § 12801(a) Plaintiff's contention that it was
 14 inappropriate to apply absorption to different routes of exposure to lead when using the
 15 0.5 µg/day MADL; as that MADL had been developed based on inhalation data only. The
 16 experts agreed (consistent with the ATSDR Toxicological Profile for Lead) that inorganic
 17 lead is absorbed very poorly, if at all, by dermal contact, and at ranges of 6-10% by
 18 ingestion under average conditions, compared with very efficient absorption of lead when
 19 inhaled. When Dr. Lakin included the standard absorption factors used by Cal/EPA and
 20 federal EPA, the amount of lead exposure he calculated from the cosmetics was at least
 21 1000 times below the MADL for all products within a kit.

22 Defendants were not required to perform independent testing of the cosmetic kits at
 23 issue. As the Plaintiff's test results were orders of magnitude below the warning level,
 24 there was no reason to believe that further testing would result in significantly elevated
 25

26
 27
 28 ¹⁸ Because providing warnings for a "kit" that contains the same products that would not require a warning
 individually would be an illogical result and would not further Proposition 65's purpose of "informing" consumers
 about exposures, the proper analysis is whether any component of the "kit" creates an exposure or requires a warning,
 not whether the "kit," as a whole, does. However, even if dermal exposure for an entire kit is considered at
 reasonably foreseeable levels of usage defendant have still proved the exposure is less than the exemption level.

1 exposures. Moreover, Plaintiff's counsel's assertion that the 3050B digestion tests were
 2 not a proper basis for quantification was unsupported by expert testimony or other
 3 evidence, and would require the court to assume that Curtis & Tompkins produced
 4 fraudulent documents by omitting important information from its laboratory reports and
 5 case narratives.

6 Moreover, Dr. Lakin appropriately relied upon the CTFA, EU, and Exposure
 7 Factors Handbook usage data, because they provided the average daily use of cosmetics,
 8 and there was no basis to conclude that a one-day exposure to lead posed a risk of harm.
 9 The 0.5 µg/day MADL was established as a daily exposure level for chronic (every day)
 10 exposure, and Dr. Callahan testified that the shortest duration of exposure to lead that had
 11 been associated in the literature with reproductive effects was ten days.

12 The court finds that Dr. Callahan's opinions about quantification of exposure were
 13 not credible. Contrary to Dr. Lakin's years of experience, her only professional
 14 experience in Proposition 65 has been as an expert for Plaintiff's counsel. She was
 15 unfamiliar with many of the concepts included in Article 8 and the Final Statement of
 16 Reasons, and her testimony that she "forgot" having read this important guidance
 17 document was not believable (she testified on the stand reading not from her own copy of
 18 the document, but from Plaintiff's counsel's copy, that was marked up with his own notes
 19 interpreting the document). In order to reach a level of exposure that required a warning,
 20 she assumed that consumers would use each and every one of the components of the
 21 cosmetic kits in 2-3 days at the same time and at a rate that would use them at a usage rate
 22 that is drastically inconsistent with the available research studies, as well as with common
 23 sense. Dr. Callahan's only explanation, that women in California use more makeup ("the
 24 entertainment capital of the world"), was implausible in light of these data. Her reliance
 25 upon her own "measurements," and refusal to use the data because they were not specific
 26 to women of childbearing age in California was unsupported by any scientific basis to
 27 conclude that such women used makeup differently than did other women (Dr. Callahan
 28 noted that she required a statistically significant difference to conclude as a scientist that

1 there was a difference, and that there were no data showing a statistically significant
2 difference).

5 Dr. Embree failed to demonstrate any exemption from a warning requirement for
6 glassware due to his failure to identify or analyze either the “level in question” or
7 concentration of lead in the glassware paint and his failure to perform a scientific analysis
8 of the reasonably anticipated rate of exposure to paint on glassware a consumer is likely to
9 suffer. (Embree Test. 10/7.) Nonetheless, Dr. Embree admitted that an appropriate
10 exposure analysis must include knowledge of what the concentration of the chemical in
11 question is in the medium of concern. (Embree Test. 10/7.) To cover for his failed
12 appreciation of the concentration of lead in the paint, Dr. Embree offered his erroneous
13 speculations that the “medium” in question might be saliva or blood. This stretch of
14 credibility is directly contradicted by an unambiguous statutory explanation that defines,
15 for consumer products, that the medium in question is the consumer product itself.
16 (Exh. G at 82 [“... a given medium, such as a certain type of food or a *consumer product*,”]
17 “some may have considerably more *exposure to a product...*”]).

18 Dr. Embree also failed to consider any glassware except for the Certified
19 International Flora and Sunrise Goblets. He neither inspected them visually nor identified
20 their lead concentration nor analyzed their reasonable rate of use by consumers.
21 Dr. Embree admitted he had no information whatsoever to make any opinions regarding
22 the nature, style, shape, amount of paint, etc. on any of these other glasses. In fact,
23 having failed to test and compare several samples of even the same pattern, Dr. Embree
24 necessarily failed to consider or appreciate the differences of lead content or lead surface
25 availability among glassware of the same exact pattern based simply upon production
26 inconsistencies, the effects of the manufacturing processes, and the variability of a hand-
27 applied decoration. In and of itself, that is an admission that Defendant has not and

1 cannot prove an entitlement to a warning exemption for every other glassware type at
 2 issue.¹⁹

3 Under Proposition 65, a consumer's "reasonably anticipated rate of exposure" to a
 4 product must be based upon a determination of the nature of the product itself, its
 5 anticipated use and "other circumstances." (Exh. G at 83.) In contradiction of the specific
 6 mandate of the statute, Dr. Embree admitted that he did not have any competent opinions
 7 on the "rate of exposure" or the nature or extent to which a consumer handles any of the
 8 glassware in question in a reasonably anticipated manner. (Embree Test. 10/7.)

9 Dr. Embree neither found existing information nor independently surveyed or
 10 studied foreseeable users to determine how many times they would handle any of the
 11 glassware at issue during use. (Embree Test. 10/7.) He made no inquiry and had no
 12 opinion on how long they would handle it, how long they would hold it during the
 13 handling process, how many times they would refill the glass prior to terminating use,
 14 where they would hold the glass, in what settings was the glass used, what other activities
 15 were occurring during use of the glass, whether the users smoked, ate, bit their nails,
 16 licked their fingers, applied cosmetics or otherwise engaged in hand-to-mouth activities
 17 during use, what types of liquids were put in the glass, the temperature of the glassware
 18 contents, the ages and sexes of the people using the glassware, whether users rubbed or
 19 "smudged" the decorated design, whether mouth or lip/tongue contact was typical on the
 20 decoration, etc. (Embree Test. 10/7.)

21 The Agency acknowledges that such "rate of exposure" to any product will vary
 22 not only from one exposure analysis to another but will also show variation within any
 23 one particular analysis. (Exh. G at 84.) The Agency thus cautions and reminds exposure
 24 assessors that, when no default exposure rate values are provided (water ingested, air
 25 breathed), the assessor must recognize that, "[s]ome [individuals] may have considerably

26
 27 ¹⁹ Dr. Embree admitted that he did not even have any idea where the glasses he tested had come from. They were not
 28 stored in any manner that would prevent contamination and there was no chain of custody delineating the history of
 such glasses. In fact, Dr. Embree did not even know whether the glasses were hand painted, machine painted or
 otherwise.

1 more exposure to a product than others.” (Exh. G at 83.) Of course, Dr. Embree did not
 2 consider, much less scientifically analyze any of these issues. Indeed, Dr. Embree
 3 specifically acknowledged that the results of his investigation and testing are not capable
 4 of or competent to support any assessment of any actual level of exposure in this case.
 5 (Embree re-direct examination 10/9). Embree did not attempt to simulate the unfounded
 6 and *assumed* range of consumer use scenarios to appreciate the spectrum of exposure
 7 rates, including the rate for those who have “considerably more exposure” to the
 8 glassware than others. (Embree Test. 10/7.)

9 Dr. Embree did not employ any methods of analysis that satisfy 22 CCR §12901.
 10 The “method of analysis” for a Defendant’s determination of the presence of and
 11 concentration of a listed chemical in a consumer product as well as the method and
 12 procedures for gathering test samples, identifying the number of products sampled, the
 13 frequency of sampling and the site of sampling. (Exh. 143 at 5, 7.) Thus, the requirement
 14 of specified scientific validity looks at the total exposure analysis process, from test
 15 design to the interpretation of the results. (Exh. 143 at 11.) Dr. Embree’s only tests, on
 16 only two patterns of products, called for either glassware handling in some non-described
 17 (and unknown to Dr. Embree) “ordinary manner” or a prescribed, but non-representative
 18 handling by a mechanical touch and rotate method that, at most, lasted only a few
 19 minutes. Dr. Embree admitted the results of his handling/wipe test were not indicative of
 20 any exposure level and not helpful in quantifying either the concentration or the rate of
 21 reasonably anticipated exposures. (Embree Test. 10/7.) As such, J.C. Penney cannot
 22 demonstrate that the experiment was conducted “under the same or similar conditions” as
 23 those relating to the incident at issue (reasonably anticipated decorated glassware use for
 24 each product), therefore the results of such experiment are not persuasive. *People v.*
 25 *Bonin*, 47 Cal.3d 808, 846-48 (1999).

26 Dr. Embree’s only opinion regarding exposure, wholly outside of the construct of
 27 §12821, was a “professional judgment” hand-to-mouth transfer factor that he
 28 acknowledged had no scientific basis that he was aware of, much less a scientific validity

1 commensurate with the technical requirements of § 12901. Dr. Embree acknowledged his
 2 5% transfer rate was, in fact, not based upon any empirical evidence of any quality.
 3 Indeed, his exposure factor was directly contradictory to the only other two factors of
 4 which he was aware - the 43% and 50% hand to mouth factors specifically used by the
 5 Consumer Products Safety Commission in assessing human exposure to toxic chemicals
 6 from hand-to-mouth behavior. (Exhs. 135, 136 & 137.) Dr. Embree neither conducted
 7 nor directed any studies or analysis to actually measure the range of the amount of hand-
 8 to-mouth lead transfer that could occur during the reasonably anticipated use of the
 9 glassware by consumers and his assumption of facts contrary to the proof destroys his
 10 "opinion" on hand-to-mouth transfer rates. *Id.*

11 Significantly eroding even his incompetent hand-to-mouth exposure calculations,
 12 Dr. Embree failed to measure the rim to any decoration to determine if Flora or Sunrise
 13 were within 20 mm area and could thus cause direct exposure. (Embree Test. 10/8.)
 14 Instead, Dr. Embree assumed that all decorations – both on other Flora and Sunrise hand
 15 paints as well as all other glassware at issue – were below the 20 mm lip and rim area
 16 despite having failed to measure the distance between the rim and any design on any
 17 glass. (Embree Test. 10/8.) Thus, Dr. Embree also failed to even consider (or opine) on
 18 the extent of any exposure, or contribution to exposure, that might result from direct
 19 contact of the mouth, lip or tongue to a colored decoration. (Embree Test. 10/8.) The
 20 resulting, ultimate exposure analyses based upon this incorrect assumption should also
 21 fail. *Hyatt, supra*, 79 Cal.App.3d 325.

22 Based upon all of these factors and failures, J.C. Penney had a statutory obligation
 23 to provide a Proposition 65 warning for every such painted glassware *unless and until* J.C.
 24 Penney could prove, under the guidelines of 22 CCR § 12901, that the level of a resulting
 25 exposure to such painted glassware was either below the statutory MADL or 1,000 times
 26 less than the NOEL. Under the framework of § 12901, J.C. Penney's failure to provide the
 27 requisite proof of an exemption results in the outcome that they "knowingly" exposed
 28 individuals to lead from glassware.

1 VI. PLAINTIFF HAS NOT DEMONSTRATED A VIOLATION OF THE FALSE
 2 ADVERTISING LAW

3 Under Business & Professions Code § 17500, a false advertising claim requires a
 4 “statement” made “with intent directly or indirectly to dispose of real or personal property
 5 or to perform services . . . concerning that real or personal property or those services,
 6 professional or otherwise, or concerning any circumstance or matter of fact connected
 7 with the proposed performance or disposition thereof, which is untrue or misleading.”
 8 Plaintiff has not identified any statement that Defendants have made concerning the
 9 products that is either untrue or misleading because Defendants did not disclose the
 10 alleged presence of lead. Plaintiff also offered no evidence that the Defendants knew or
 11 should have known that the statement was untrue or misleading.

12 “[A] plaintiff in a false advertising or unlawful competition action has the burden
 13 of producing evidence that the challenged advertising claim is false or misleading.”
 14 *National Council Against Health Fraud, Inc. v. King Bio Pharmaceuticals, Inc.*, 107
 15 Cal.App.4th 1336, 1342 (2003) (citation omitted). Thus, unlike Proposition 65, Plaintiff
 16 bears the burden of proof on all elements of his false advertising claim. 107 Cal.App.4th
 17 at 1348.

18 Plaintiff’s expert, Dr. Mazis, testified that, in the absence of a “statement” by
 19 Defendants, merely selling a product with lead is misleading because Defendants did not
 20 disclose the presence of lead. This testimony is inconsistent with the terms of § 17500,
 21 because it alters the law to remove the term “statement.” As defined in Webster’s Revised
 22 Unabridged Dictionary (1998), a “statement” is “That which is stated; a formal
 23 embodiment in language of facts or opinions; a narrative; a recital.” The usual and
 24 ordinary meaning of the term “statement” simply does not include Plaintiff’s theory that
 25 liability can be imposed due to no statement. Liability for the failure to disclose facts has
 26 been imposed under § 17500 only where the Defendant has made a true statement that is
 27 “couched in such a manner that it is likely to mislead or deceive the consumer, such as by
 28 failure to disclose other relevant information” *Day v. AT&T Corp.*, 63 Cal.App.4th

1 325, 332-33 (1998); *Committee on Children's Television, Inc. v. General Foods Corp.*, 35
 2 Cal.3d 197, 307 (1983).

3 Moreover, an advertisement "is judged by the effect it would have on a reasonable
 4 consumer." *Lavie v. Procter & Gamble Co.*, 105 Cal.App.4th 496, 507 (2003). "Under
 5 the reasonable consumer standard, Plaintiff is required to show not simply that the
 6 Defendants' bulletins *could* mislead the public, but that they were *likely* to mislead the
 7 public." *Haskell v. Time, Inc.*, 965 F. Supp. 1398, 1406-07 (ED. Cal. 1997) (citation
 8 omitted; emphasis added). No such statement was made by either Defendant.

9 Dr. Mazis's opinion was based on the assumption that consumers "want to know"
 10 about hazardous chemicals in products in general and that the failure to disclose the
 11 presence of lead is misleading under all circumstances and a material omission. Yet, as
 12 Dr. Stewart pointed out, market research supports the conclusion that consumers want to
 13 know about toxic substances when experts agree that those substances can harm them.
 14 And it is difficult to see where liability could be based on this vague expectation, in light
 15 of the holding in *Klein v. Earth Elements, Inc.*, 59 Cal.App.4th 965 (1997), where the
 16 court held that there was "nothing misleading" about a statement that "'You can feed
 17 Nature's Recipe ... with confidence that you are doing something good for your dog,'"
 18 even though the dog food was contaminated, where the Defendant "did nothing to cause
 19 the consuming public to accept the contaminated food as uncontaminated." 59
 20 Cal.App.4th at 970. Plaintiff did not show that the Defendants did anything to cause the
 21 public to believe that they would not be exposed to lead from the products.

22 Further, Plaintiff did not introduce any evidence to support the concept that the
 23 glassware or cosmetics actually could harm users, choosing instead to rely upon the claim
 24 that there is no proven safe level of lead. If that were sufficient to support a false
 25 advertising claim, the fact that lead is present in virtually everything that consumers come
 26 into contact with would mean that virtually everything would require a disclosure, and
 27 consumers would be deluged with useless warnings that were unrelated to actual or
 28 potential harm posed by a product. As Dr. Stewart noted, the potential adverse impacts

1 from this approach include drowning out other important warnings and causing consumers
2 to forego benefits of products (or even benefits of lead in products) without any increase
3 in safety.

4 VII. CONCLUSION *(Liability Phase)* *ab*

5 For the foregoing reasons, the Court finds no violation of Proposition 65 for both
6 Defendants for their sale of cosmetic products and no violation for both Defendants for
7 false advertising. The Court does ~~not~~ find J.C. Penney to have violated Proposition 65 for
8 any sales of painted glassware which may have occurred.

9 ~~In any event, Defendants' counsel shall prepare, serve, and submit within~~
10 ~~twenty(20) days a proposed Judgment pursuant to the terms of this Tentative Decision.~~

11
12 DATED: *Feb 9, 2005*
